

## Statement of Commitment

Datacars are committed, to adopting and promoting environmental good practice in all their operations, and require the same commitment from all staff that are employed by the organisation. Thus continually improving the environmental performance

Specifically, Datacars will:

- Comply with all relevant legislation, Government policies and standards of good practice for environmental management;
  - Seek to minimise the adverse environmental impacts of the organisations vehicle aspect by purchasing the greenest available vehicles and ensuring that they are maintained
  - Make efficient use of natural resources, including gas, electricity and water;
  - Operate effective arrangements for the reduction, reuse and recycling of waste.
  - Work in partnership with staff to promote effective environmental management; to help support the companies policy to prevent pollution.
  - Work with staff to reduce adverse environmental impacts associated with activities such as the provision of green driving guides and recycling points in the office
- Facilitate the effective implementation of any environmental policies and procedures by providing appropriate information and training to employees.

To achieve the above, Datacars recognise that they must have a good understanding of the environmental impacts of their operations, and must develop realistic objectives and targets for the reduction of any adverse impacts.

## Summarised Objectives 2007

### Waste Reduction

To minimise the organisations impact on the environment from waste

### Green Purchasing

To minimise the environmental impact through green purchasing.

### System Management

To re-launch the management system supporting the business

### Environmental Awareness

To become Market leaders in the private hire field and promoting the use of ISO14001

### Carbon Balance

To offset the carbon impact of the private hire by neutralising the carbon for the account customers and further offering the ability in the future for all clients.

## Steps to Implementation

ISO 14001 requires a structured approach to implementation of the EMS and understanding the nature of the impacts of the organisation ISO 14001 is based on the plan – do – check – act cycle, enabling continual environmental improvement, communication of performance of the system and of the organisation.
